Quantitative Finance and Economics provides a platform for research in finance and economics that deploys mathematical reasoning and theories from differential equations and dynamical systems, stochastic analysis and stochastic differential equations, probability theory, statistical inference and methods of econometrics. Coverage includes all major areas of finance and economics, particularly risk management.

Quantitative Finance and Economics publishes original quantitative, statistical, and mathematical research with applications in economics, finance. The main objective is to publish innovative articles which utilize mathematical principles and methods to study problems in these areas. While every paper will involve mathematics, each paper must make clear its contribution to economics, finance and management. Cutting edge papers that are highly innovative and seek to provide fundamental new results and comment on new directions are highly encouraged.
